

How to create multiple instances of MetaTrader4

Step 1 – Create new folder

- First create a new folder at your new chosen location.
- For Example: **Computer\Local Disk (C:)\Users\Public\Public Documents**
- Name the folder something along the lines of **MT4 – Instance 2** (See below Diagrams)

How to create multiple instances of MetaTrader4

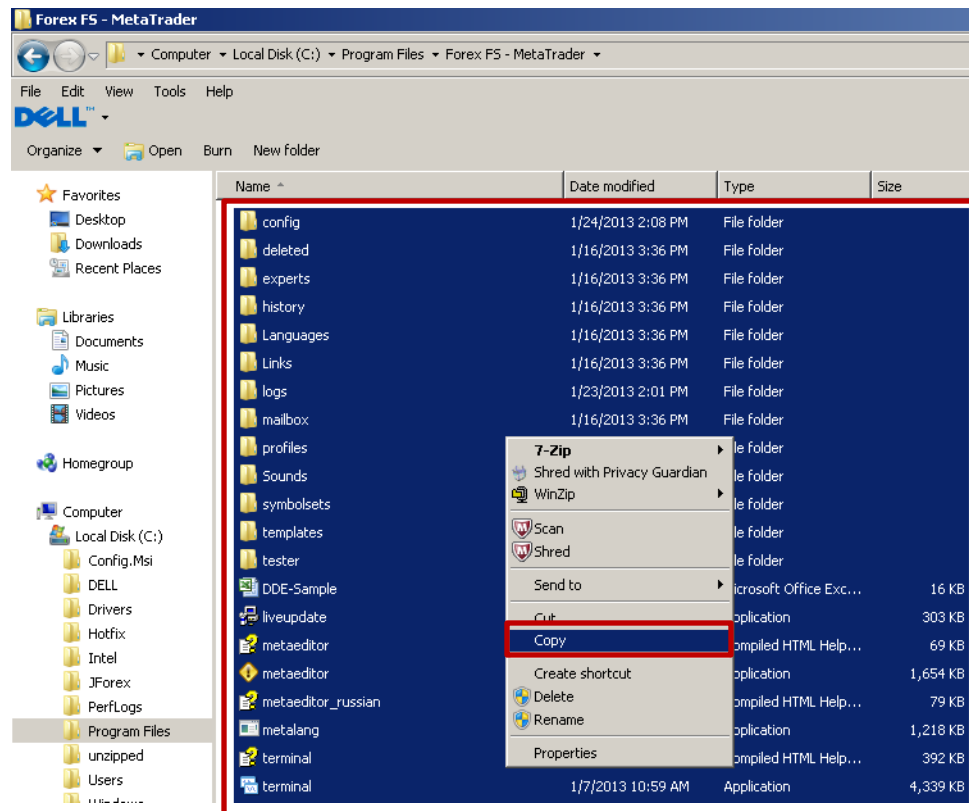

Step 2 – Find the original MT4 folder and copy contents

- Find the original MT4 folder that you wish to copy. In this case you will be looking for **Forex FS – MetaTrader**

-If you did not change the location setting with the initial setup of your original MT4 platform, you should find this folder in the following location;

- **Computer\Local Disk (C:)\Program Files\Forex FS – MetaTrader**

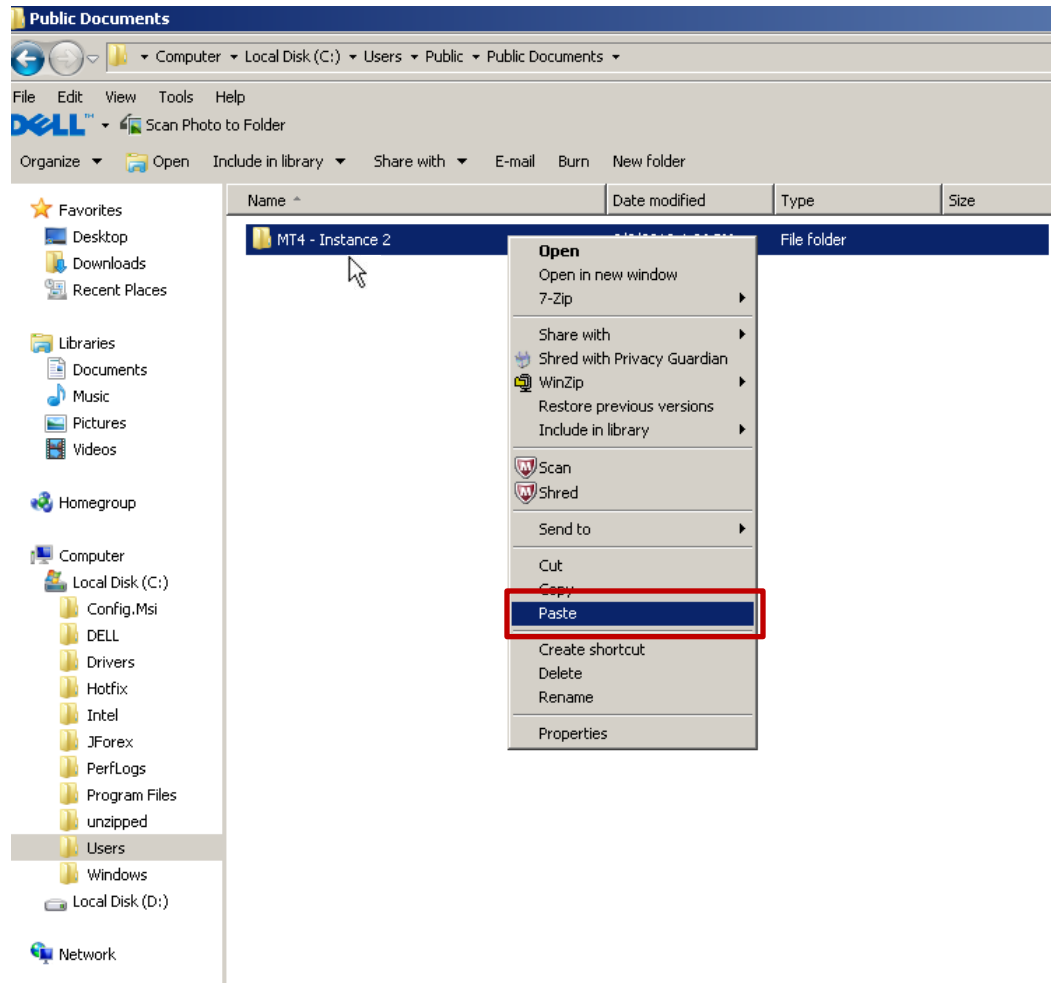

- Once this folder has been located, you will have to copy its entire contents
(See diagram below)

How to create multiple instances of MetaTrader4

Step 3 – Paste contents to created folder

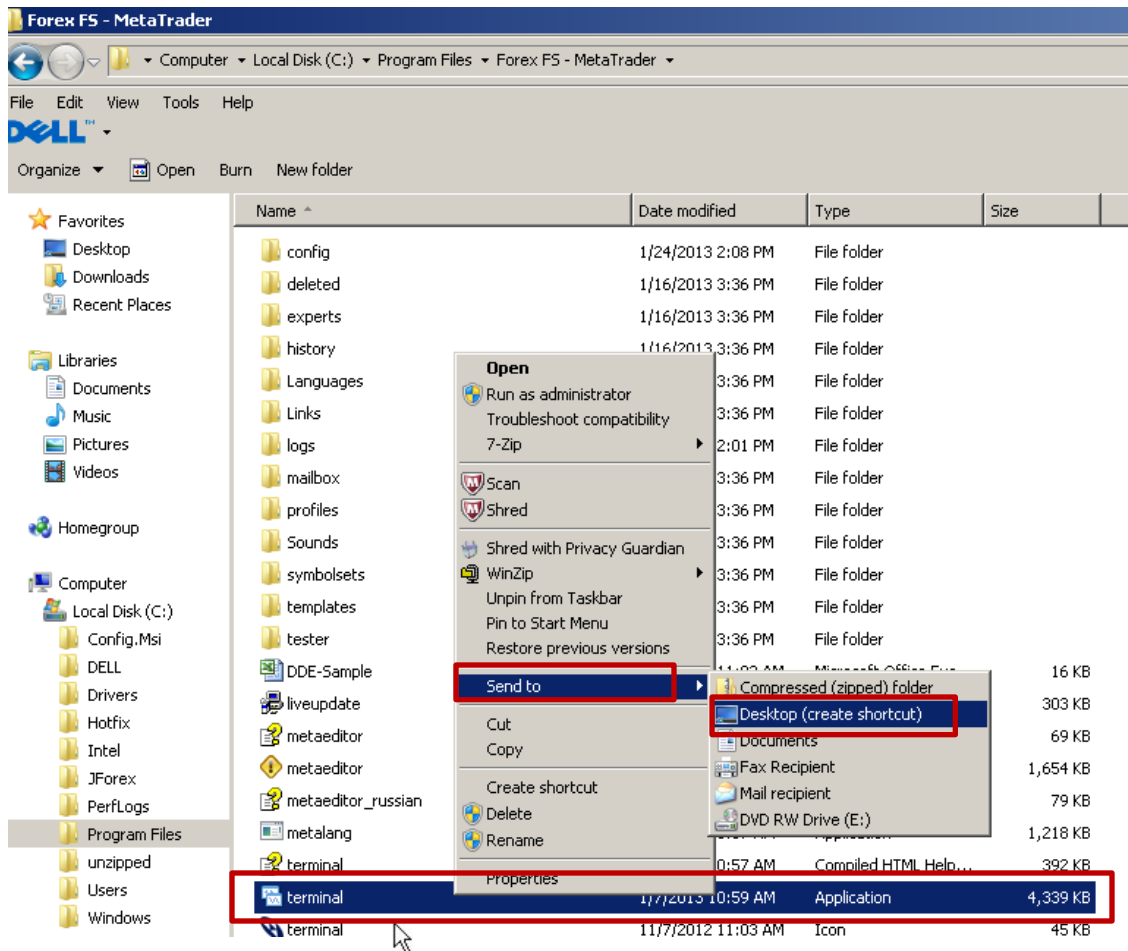

- Return to the location of the folder you created earlier titled **MT4 – Instance 2**
- Paste the contents that you copied in the previous step into this folder (See below diagram)

How to create multiple instances of MetaTrader4

Step 4 – Create desktop shortcut for second instance

- Locate the terminal application file (the largest file) in the new folder
- Right click and select send to desktop (See below diagram)

How to create multiple instances of MetaTrader4

Step 5 – Name desktop icon

- Rename your new instance of the MT4 terminal e.g. ForexFS – MT4 – Instance 2

Step 6 – Repeat it as many times as necessary, ensuring you name each instance with a different name
