

How to update your MT4 Platform

If you receive an update from Forex FS stating that a new version of the MT4 platform is available but the platform does not automatically update upon launch, you will need to run your MT4 platform in Administrator Mode.

1. First check what version of the platform you currently have as it may have already auto updated.

To check the platform version click “Help” then “About”

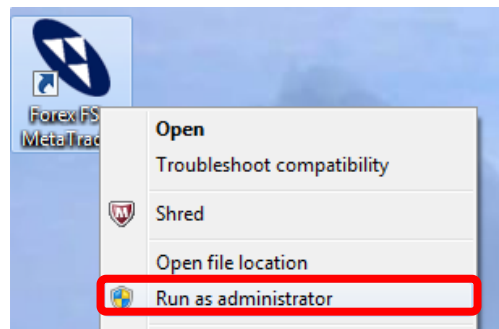

2. The Build and Version of your software will appear below the Forex FS logo

3. If your platform is not up-to-date:

Ensure all MT4 Platforms are completely turned off then **Right click** on the MT4 platform icon and select **“Run as administrator”**.

The update should take place automatically. To check that the update has worked, click **“Help”** then **“About”**
